SPECIAL SAFETY PRECAUTIONS:
PRECAUTIONS TO BE TAKEN IN HANDLING AND STORING: WARNING! IRRITANT. Read MSDS before use. Do not get in 
eyes. Avoid contact with skin and clothing. Avoid inhalation vapor or mist. Use with adequate ventilation. Wash thoroughly after 
handling, and before eating, drinking or smoking. Remove contaminated clothing and wash before use.

OTHER PRECAUTIONS: Avoid extreme heat - keep away from flame or other ignition source.

IV. SURFACE PREPARATION MINIMUM REQUIREMENTS (USE SPECIFIC STANDARD NUMBER(S)):
(a) INITIAL - Remove grease, oil, and dirt (SSPC-SP1) or other approved method followed by grit or shot blasting.
(b) TOUCH-UP – For deck edges, hard to reach areas and for areas not to receive non-skid, use power tool cleaning to bare metal,  
SSPC-SP11 is recommended.
(c) PROFILE: - Abrasive Blasting  
UHP  Water Jetting  
MIN. SSPC-10/NACE 2 MAX. SSPC-5/NACE 1  
NACE5/SSPC SP12/ WJ-2/NV-2

NOTE: Cleaning via UHP-WJ does not create an anchor tooth profile. The substrate may require abrasive blasting in 
order to produce an acceptable minimum or specified anchor tooth profile prior to application of an approved primer.

(d) SPECIAL INSTRUCTIONS - Substrate Anchor Tooth Profile: A minimum of 2 mils anchor tooth profile is required for all 
areas designated to receive nonskid on both critical and non-critical decks. An anchor tooth profile depth of 3 – 4.5 mils 
is required for the application of nonskid coatings systems on Aircraft Carrier flight and hangar decks. Application of 
nonskid coatings systems on substrates which exhibit anchor tooth profile depths greater than 7 mils deep is not 
recommended.

PRIMER REQUIREMENTS (IF APPLICABLE): ITW American Safety Technologies MS-7C/MS-7CZ primer should be applied at 2- 
3 mils minimum DFT, above the averaged anchor tooth profile.
III. MIXING PROCEDURE: **NOTE:** Incorrectly mixed material will not cure properly

Section V. (f) Special Instructions

ITW American Safety Technologies: Recommended Equipment and Mixing Instructions for Nonskid

Blade: Jiffy Mixer PS-1 blade (www.Jiffymixer.com) or ASTI approved equivalent blade with a 20-24 inch shaft suitable for mixing heavy, mastic materials.

Mixer: 3/4 Inch Drive such as a Milwaukee 3/4 Inch Super Hole-Shooter or equivalent

HP of drill: 3/4 HP minimum

Rpm Requirements: - 350 - 500 maximum

Required pre-mixing time for Part A component only: 2 - 3 minutes

Required mixing time for resin base & hardener in pail: 3 - 5 minutes

Mixing Instructions:

1) Pre-mix base component. Make sure all settlement is lifted off the bottom of the container and is uniformly dispersed in the material by traversing the bottom and side of the pail.

2) Add entire contents of hardener bag into the resin base material. Mix hardener and base material for 3-5 minutes constantly moving the blade up, down and around inside the mixing container being sure to scour the bottom and sides of the pail until material assumes a uniform color, consistency and appearance.

3) Material should be applied to the deck within 5 to 10 minutes. NOTE: Pails should not be left for extended periods of time once mixed as this could cause variations in appearance in the cured deck.
